

## WISER Pan Africa

---

### Knowledge Management Workshop

16-17 October 2016 in Addis Ababa, Ethiopia

### Concept Note

## Introduction

The Weather and Climate Information Services for Africa (WISER) was conceived by DfID in 2015 to stimulate the uptake of climate information by policy makers and vulnerable groups including the youth and women. The thinking behind establishment of WISER is made clear by the following extract from the WISER business case:

*Africa's increasingly variable weather and climate threatens development. Agriculture and food security, water, energy, infrastructure, and health are already sensitive to weather related shocks. Rising temperatures, changing rainfall patterns and climate-related disasters (especially floods and droughts) will erode gains in poverty reduction and set back economic development.*

WISER is composed of two components:

- The East Africa component whose implementation is led by the UK Met-Office
- The Pan Africa component led by ACPC

The objectives of the WISER pan-Africa component are:

1. Strengthen the governance and enabling environment for climate information services uptake and use in Africa, including evidence on impact, donor coordination, protocols for sharing data
2. ACPC's set up and first grants under Climate Research for Development (CR4D) (up to 6 grants to a maximum total value of \$3m) for delivery in the period to December 2016
3. Support a fellowship programme (particularly where such fellowships link to CR4D or sub-grant projects)
4. Developing partnerships to the AGN and improve awareness and access to CIS among African youth, women and parliamentarians

In order to deliver on the foregoing objectives, knowledge management (KM) is an important link to facilitate harnessing information and knowledge and to ensure channeling to beneficiaries across the African continent. Further, KM has to work closely with the communications efforts to ensure that climate information and knowledge address specific needs of beneficiaries, and are delivered in a timely manner, in the right language and format, and using the most efficient dissemination channels.

During this early stage of WISER activities, the ACPC is developing both a partnership framework and a strategy to guide the KM work within the pan-Africa WISER component.

## Objectives

The following are the objectives of the KM workshop:

1. Convene key WISER pan-Africa KM partners, including knowledge networks and beneficiaries, to agree on modalities of creating a partnerships for collaborating on knowledge sharing and dissemination
2. Lessons sharing from participants representing climate information and development KM functions, especially in developing countries
3. Discuss needs of CI beneficiaries within Africa

## Expected Results

1. Increased understanding of the role of KM in decision making
2. Practical perspectives of KM implementation at different scales shared
3. User needs identification, contextualization and dissemination approaches shared.
4. Collaboration and partnership approaches and principles better understood
5. Better understanding of challenges encountered by climate knowledge brokers in accessing, organizing and sharing knowledge

## Structure

The WISER KM workshop will be held on the 16-17 October 2016 in Addis Ababa, Ethiopia. The two day event will consist of open moderated discussions and presentations by selected climate knowledge networks from developing countries, who will share lessons, opportunities and challenges their institutions have encountered.

KM representatives from ECA member countries, Met services in Africa, RCCs and Civil Society will also share their understanding of the CIS landscape, including needs and challenges.

Breakout sessions will be used to facilitate group work on Africa's climate information and knowledge needs, KM challenges and potential KM partnerships across the continent.
